Lab Experiment 6

Simulating the Lifecycle Stages for UI Design using the RAD Model and Developing an Interactive Interface using Axure RP

1. Aim

To demonstrate the lifecycle stages of User Interface (UI) design using the Rapid Application Development (RAD) model and to develop a small interactive interface using Axure RP.

2. Tools Required

Software: Axure RP (<https://www.axure.com/>)

3. Overview of RAD Model

The RAD model emphasizes quick development and frequent iteration. It consists of four main phases:

- Requirements Planning
- User Design
- Construction
- Cutover

4. Procedure

Phase 1: Requirements Planning

Identify Key Features:

- Navigation: Home, Product Categories, Product Details, Cart, Checkout, Order Confirmation, Order History.
- User Actions: Browsing, Searching, Adding to Cart, Checkout, Tracking Orders.

Create a Requirements Document:

- List all features and functionalities.
- Document user stories and use cases.

Phase 2: User Design

1. Install and Launch Axure RP: Download and install Axure RP from its official site.
2. Create a New Project: Navigate to File → New and name the project (e.g., "Shopping App Interface").
3. Create Wireframes: Design wireframes for:
 - Home Page• Product Categories• Product Listings• Product Details• Cart• Checkout• Order Confirmation• Order History
4. Add Interactions: Use the Properties panel to add interactions such as OnClick navigation.
5. Create Masters: Design reusable components like headers and footers.
6. Add Annotations: Document the purpose and functionality of each element through the Notes panel.

Phase 3: Construction

1. Develop Interactive Prototypes: Add transitions, dynamic panels (e.g., carousels, pop-ups), and simulate real-time user interaction.
2. Test and Iterate: Use the Preview function to review. Collect feedback and adjust designs accordingly.

Phase 4: Cutover

1. **Finalize and Export:** Finalize all designs and interactions. Export the prototype as an HTML file or upload it to Axure Cloud for sharing.
2. **User Training and Support:** Conduct training sessions to demonstrate the UI. Provide supporting documentation and help users troubleshoot.

5. Conclusion

By following the RAD model and using Axure RP, a functional and user-friendly interactive interface can be rapidly designed and iterated based on user feedback, ensuring better usability and quicker development cycles.
